NEWS FOR IMMEDIATE RELEASE

New SD-WAN Technology Streamlines Network Performance

BrevAll Technologies Offers Exciting New Solution to Replace Costly MPLS

North Richland Hills — August 30, 2017 — BrevAll Technologies, a leader in unified communications, has added SD-WAN (Software-Defined Networking in a Wide Area Network) to its list of offerings, the company announced today.

SD-WAN simplifies the management and operation of a WAN (Wide Area Network) by separating the networking hardware from its control mechanism. This allows businesses to build higher-performance WANs with lower-cost Internet access, and to partly or fully replace expensive private WAN connection technologies such as MPLS. Gartner, a market research firm, predicts that 30% of enterprises will deploy SD-WAN technology in their branches by the end of 2019.

“SD-WAN development provides us with a new way to enhance the performance, profitability, security and safety of our customers’ networks,” said Paul Enloe, CEO of BrevAll Technologies. “This technology has a number of financial and security benefits for companies that are taking their businesses more fully to the cloud, because SD-WAN itself is a cloud-based transport.”

When data becomes independent and can run on any transport protocol — including 3G, 4G LTE, MPLS, Internet, Ethernet, Serial or Wi-Fi — it gives businesses using SD-WAN total transport flexibility.

“While lower costs and more efficient operations benefit everyone, the fastest adopters of SD-WAN are organizations that need to deploy highly functioning teams across multiple physical locations,” said Enloe. “The more complex an organization’s network, the more it can be streamlined and simplified by SD-WAN.”

BrevAll Technologies was an early adopter of SIP (Session Initiation Protocol), which has proven to be a highly effective mode of data transport. SD-WAN takes that solution to the next level, said Enloe.

“While our team is excited by the technical aspects of this technology, we’re doubly excited by how this new technology will help our customers increase profitability,” Enloe stated. “When we introduced SIP to our customers, they enjoyed improved performance, dramatic cost savings, enhanced security and a better overall experience. SD-WAN is simply the next step in that evolution.”

About BrevAll Technologies

BrevAll Technologies is a privately owned, Texas based, technology sales and service company with national distribution services. It was founded in 1987 to offer customer-oriented service and competitive pricing options for a wide range of products and services.

BrevAll Technologies has the resources, experience and quality commitment to maintain preferred-vendor status with our customers. We offer custom-designed communications solutions to support your business needs and long-range goals. Our sales representatives and trained technicians team up to support your system product and service requirements. Whether remanufactured or cutting edge systems and parts, we provide value-added service with on-site, quality controlled repair and warehousing facilities.

Call us Toll-Free at 800.838.0911 to learn more or visit www.brevall.com.
